Preface

Please read this page before preparing your TouchFX product for game play

The following safety instructions apply to all game operators and service personnel. Specific warnings and cautions will be included throughout this manual.

Use the following safety guidelines to help protect the system from potential damage and to ensure your personal safety:

- Electronic components in the game cabinet run on 115VAC 60Hz (230V/ 50Hz in most of Europe, the Middle East and the Far East delivered units).
- To help prevent electric shock, plug the system into a properly grounded power source. These cables are equipped with 3-prong plugs to help ensure proper grounding. Do not use adapter plugs or remove the grounding prong from a cable. If you must use an extension cable, use a 3-wire cable with properly grounded plugs.
- To help protect your system from sudden increases and decreases in electrical power, use a surge suppressor, line conditioner or Uninterruptible Power Supply (UPS).
- Be sure nothing rests on the system’s cables and that the cables are not located where they can be stepped on or tripped over.
- Keep your system far away from radiators and other heat sources.
- Do not block cooling vents.

Precaution for Game Operation

Adrenaline Amusements Inc assumes no liability for injuries incurred while playing our games. Operators should be aware that certain health and physical conditions may make people susceptible to injury when playing video games.
Chapter 1

Preface

Safety

Warning

To avoid electrical shock, unplug the cabinet before performing installation or service procedures.

If a power cord is damaged, it must be replaced by the equivalent power cord available from your distributor.

Adrenaline Amusement Inc assumes no liability for any damages or injuries incurred while setting up or servicing the cabinet. Only qualified service personnel should perform installation or service procedures.

Environmental Conditions

Cabinet is intended for indoor use only. Be sure to keep the cabinet dry and maintain operating temperatures of 59°-86° (15°-30°C).
Chapter 1

Preface

FCC Notices (United States)

Electromagnetic Interference (EMI) is any signal or emission radiated in free space or conducted along power or signal leads, that endangers the functioning of radio navigation or other safety service, or that seriously degrades, obstructs, or repeatedly interrupts a licensed radio communications service. Radio communications services include, but are not limited to, AM/FM commercial broadcast, television, cellular services, radar, air-traffic control, pager, and Personal Communication Services (PCS). These licensed services, along with unintentional radiators such as digital devices (Including computer systems) contribute to the electromagnetic environment.

Electromagnetic Compatibility (EMC) is the ability of items of electronic equipment to function properly together in the electronic environment. While this computer system has been designed and determined to be compliant with regulatory agency limits for EMI, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference with radio communications services, which can be determined by turning the equipment off and on, you are encouraged to try to correct the interference by one or more of the following measures:

• Re-orient the receiving antenna
• Relocated the cabinet relative to the receiver
• Plug the game into a different outlet so that the computer and the receiver are on different branch circuits

If necessary, consult a Regulatory EMC representative of Adrenaline Amusements Inc or an experienced radio/television technician for additional suggestions. You may find the FCC interference Handbook to be helpful. It is available from the U.S. Government Print Office, Washington, DC 20402.

This device has been tested and complies with the limits for a Class A digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy. If not installed and used in accordance with the instruction manual, it may cause harmful interference with radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case you will be required to correct the interference at your own expense.

Operation is subject to following conditions:
• This device may not cause harmful interference.
• This device must accept any interference received, including interference that may cause undesired operation.
Chapter 2

Game Features

Hardware features
• Mini ITX INTEL computer
• 46” FULL HD LCD monitor
• Multitouch screen, detects 6 simultaneous touches

Chapter 3

Machine Installation TFX3

1. Carefully remove the Cabinet from the shipping container giving yourself enough space.
2. Move the cabinet to the desired location
3. Some TFX3 are shipped in 2 parts, insert the top part. (see fig 1)
4. Insert the 3 fluorescent kits in the blue tubes (see fig 2)
5. Open the coin doors and plug in all 3 plugs from the fluorescent to the main power strip
6. Locate the power cord, you have 2 options: insert the power cord to the bottom of the machine to power it from a floor outlet or run an extension cable through one of the blue tube to power it from the ceiling.
7. Hang on screen to the support, insert the 4 bolts and then adjust to the desired height (normaly in the middle position). Do the same for all the other screens (fig 3)
8. Plug in the connectors between stand and screen (USB, Network, AC Power, and DC power)

Operator Menu & Game Setup

This chapter describes how to use the Operator Control Panel to navigate through the Operator Main Menu to set up your product and adjust all the game play parameters.

The Operator Menu

To access the Operator Menu, use the Operator button located inside the coin door. This screen will appear.

To navigate the menu, press on the line you want to change then press the arrows to adjust the value.

Service & Repair

Computer connections  ADR-11-1002

- Power button
- USB to I/O board
- Network to Router
- DC from Power supply
- HDMI to monitor
- Blue Dongle
- Touch screen
Touch screen troubleshooting and calibration

• Disconnect the USB cable between cabinet and screen, connect the keyboard. Press the letter Q, this should quit the game and fall back to the windows desktop. Disconnect the keyboard and connect the mouse. Double click on the Multitouch icon.

![Multitouch Platform Device Disconnect](image)

• If window title screen says ‘device disconnected’
  o Check DC molex connection between cabinet and monitor. With a volt meter check if you have 5V on red and black wire coming from cabinet. If not check DC power supply accessible from the coin door located in the center of the cabinet.

  o If 5V is ok, Remove monitor bezel and computer bottom cover (see chapter 6) and check USB connection between computer and touch screen. Also check if round barrel connection is ok for DC power to touch screen.

• If window title screen says “device connected”
  o Click on calibration then follow the onscreen instructions. If touchscreen does not respond as expected during calibration go to next step

  o Click on advanced, OK, then ‘Reset TouchData’. It will ask you to wait 10 seconds then click on yes. When done retry calibration.
Troubleshooting- Windows boot error

At machine start up if you get a windows error message

“Windows boot manager”

The boot selection failed because a required device is inaccessible.

What you are required to do

• Disconnect the usb cable between cabinet and screen, connect the keyboard.

• Disconnect power and reconnect to restart computer.

• Press F8 repeatedly until you get to the windows boot selection

• If you get to a blue boot disk selection press Enter then press again on F8 repeatedly until you get to the windows boot selection

• Select Normal boot then press Enter.

• Disconnect keyboard and reconnect USB connection

Chapter 5

Fluorescent tube replacement (TFX3)

- Open the coin door and unplug the power cable of the Fluorescent assembly
- With a step ladder, lift the fluorescent assemblies from inside the blue tubes
- To replace the bottom fluorescent, remove the top bolt on each gray tube as indicated by the arrows on figure 2. then with the 2 persons lift up, and remove the top part. You will then have access to the bottom fluorescents.
